A useful problem-solving strategy was presented for use with these equations and two examples were given that illustrated the use of the strategy. Then, the application of the kinematic equations and the problem-solving strategy to free-fall motion was discussed and illustrated. In this part of Lesson 6, several sample problems will be presented.

### Kinematic Equations: Sample Problems and Solutions

For the following problems, show all work and write the answers in the correct blank. 1. An object falls from a high building. Ignoring air resistance, what will its velocity be after 6 seconds of falling? 2. An object falls from a high building and hits the ground in 9.0 seconds.
