Here is what I think is the answer, although I don't know this for a fact. Elephant skin lacks any reddish tint because it is so thick that underlying blood vessels don't show through. The grayish darkening is caused by melanin, the same thing that is responsible for human skin darkening. 3.2K views

(March 2010) The grey-faced sengi (*Rhynchocyon udzungwensis*) is a species of elephant shrew that is endemic to the Udzungwa Mountains of south-central Tanzania. The discovery of the species was announced in January 2008; only 15 species of elephant shrew were known until then, and the last discovery was made more than 120 years ago.
